AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims

Claims 1-12 (Canceled)

Claim 13 (Currently amended): A video generation processing apparatus comprising:

a plurality of imaging apparatus each for picking up a video;

video storing means for storing the videos picked up by the plurality of imaging

apparatus and additional information of respective videos;

related-video condition generating means for generating related-video conditions that

relates relate to base video from the video and an additional information stored in the video

storing means; and

video acquiring means for acquiring related video that meets the related-video conditions

from the video storing means,

wherein the videos picked up by the plurality of imaging apparatus are processed so as to

display a plurality of videos which are related with each other and satisfy predetermined the

related-video conditions.

Claim 14 (Currently amended): The video generation processing apparatus according to

claim 13, wherein the video generation processing apparatus acquires an imaging position

information of the base video from video storing means by using first predetermined conditions

that select the base video.

Page 2 of 9

Reply to Office Action dated June 9, 2009

and generates the related-video conditions based on the acquired imaging position

information and [[data]] date/hour information contained in the first predetermined conditions.

Claim 15 (Previously presented): The video generation processing apparatus according

to claim 13, further comprising display processing means for processing the base video and the

related video to display simultaneously on one screen.

Claim 16 (Previously presented): The video generation processing apparatus according

to claim 13, wherein an imaging apparatus for picking up the related video and an imaging

apparatus for picking up the base video are different respectively.

Claim 17 (Previously presented): The video generation processing apparatus according

to claim 16, wherein the related-video conditions contain the imaging position information and

the date/hour information.

Claim 18 (Previously presented): The video generation processing apparatus according

to claim 16, wherein the related-video conditions contain a position information of neighboring

areas adjacent to a position indicated by the imaging position information and the date/hour

information.

Claim 19 (Previously presented): The video generation processing apparatus according

to claim 16, wherein the related-video conditions contain a position information of invisible

areas that are not picked up in the base video and the date/hour information.

Page 3 of 9

Reply to Office Action dated June 9, 2009

Claim 20 (Previously presented): The video generation processing apparatus according

to claim 16, wherein the related-video condition generating means acquires imaging position

information of video adjacent to the base video in a video feature space to generate the related-

video conditions.

Claim 21 (Previously presented): The video generation processing apparatus according

to claim 16, wherein the related-video condition generating means acquires imaging position

information of videos having a relevancy with the base video in meaning contents to generate the

related video conditions.

Claim 22 (Previously presented): The video generation processing apparatus according

to claim 13, wherein respective videos are ordered in response to a priority rule when the related

video contains at least two videos.

Claim 23 (Previously presented): The video generation processing apparatus according

to claim 13, wherein the additional information of respective videos stored in the video storing

means contain imaging position information, date/hour information, and imaging apparatus

information, and

a data structure of the video storing means is composed of a two-dimensional

arrangement in which a first axis indicates the imaging position information and a second axis

indicates the date/hour information and then information of the imaging apparatus that shot a

predetermined imaging position at a predetermined date/hour are saved into a cell at which a

Page 4 of 9

predetermined imaging position information and a predetermined date/hour information intersect

with each other.

Claim 24 (Currently amended): A video generation processing method comprising:

picking up a video by a plurality of imaging apparatus;

storing the videos picked up by the plurality of imaging apparatus and additional

information of respective videos in video storing means;

generating related-video conditions that relate to a base video from the video and an

additional information stored in the video storing means;

acquiring a related video that meets the related-video conditions from the video storing

means; and

processing the videos picked up by the plurality of imaging apparatus so as to display a

plurality of videos which are related with each other and satisfy predetermined the related-video

conditions.

Claim 25 (Currently amended): [[The]] A video storing apparatus for storing videos

picked up by a plurality of imaging apparatus and additional information of respective videos,

wherein the additional information of respective videos contain imaging position

information, date/hour information, and imaging apparatus information, and

a data structure of the video storing means apparatus is composed of a two-dimensional

arrangement in which a first axis indicates the imaging position information and a second axis

indicates the date/hour information and then information of the imaging apparatus that shot a

predetermined imaging position at a predetermined date/hour are saved into a cell at which a
